FIX YOUR CITY

BikeAble

Where Skopje actually rides.

A Waze-style app for cyclists

The live map, Skopje

Sudoers

Skopje was a bike city

1960s

100,000+

bikes in a city of 190,000

→

2010

1.4%

of trips made by bike

The city is building lanes again. Where should the next one go?

Source: Green European Foundation, “Cities as Places of Hope: Skopje” (2020)

How it works

1

Report

Blocked lane? Pothole? One tap.

2

Ride

Routes logged anonymously as you go.

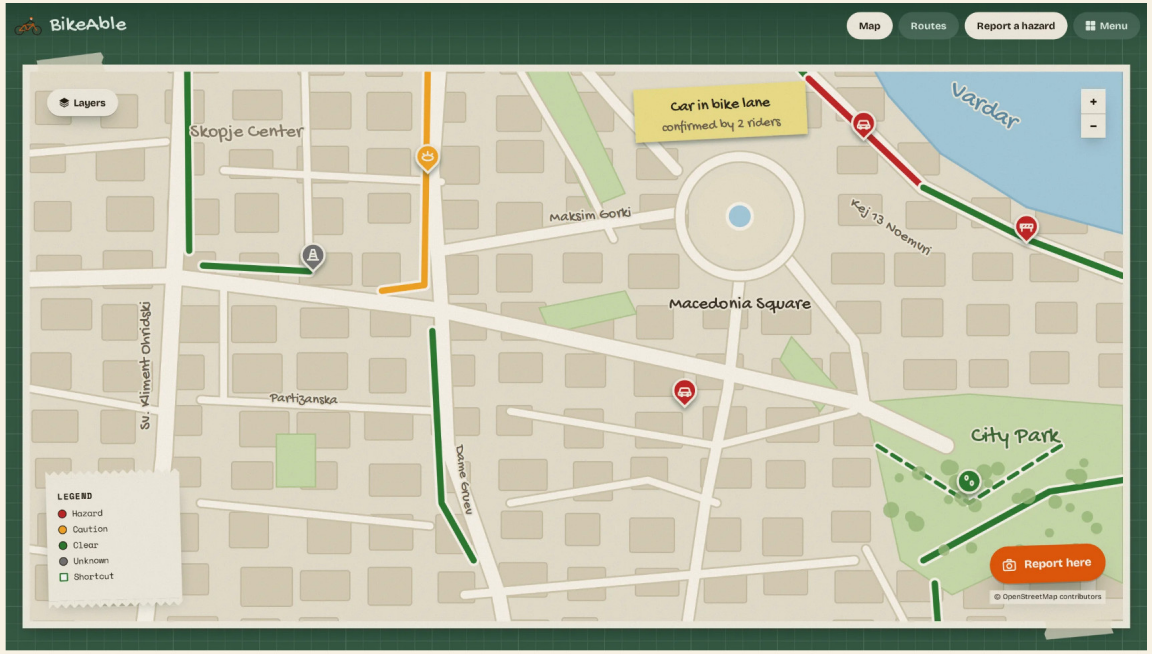

3

Plan

The city sees where lanes are missing.

Hazard reports bring riders in. Rides show the gaps.

The lane ends. The riders don't.

1. The bike lane stops at the junction.
2. Riders keep going on the pedestrian walkway.
3. Obstacles force them to weave

THE DECISION

Extend the lane to the junction.

BikeAble live map mock · 41.9953, 21.4278

What the city gets

A

Gap map

Where riders go, against where lanes exist.

B

Wish spots

Streets riders avoid, or wish had a lane.

C

Private

Aggregated only. Trip start and end points trimmed.

Evidence for where the next lane goes.

Fix the lane that ends.

BikeAble: a Waze-style app that shows cities where cyclists really ride.
